

Permanent Edition Himeji City Flood/Landslide Disaster Hazard Map Wide Area 1

The Flood/Landslide Disaster Hazard Map anticipates damage caused by flooding and landside disasters and forecasts the scope of this damage on the map. This information includes potential flood zones as well as floodwater depths. The possible flood zones shown in this map forecast rivers overflowing with water due to the highest amount of rainfall thought possible in Hyogo Prefecture (L2: largest potential rainfall is equivalent to a 1,000-year rainfall). This information also includes the potential scope of housing collapse near rivers due to bank erosion and flood waters. Hyogo Prefecture surveyed potential landside disaster zones for this landslide disaster information according to the Act on Sediment Disaster Countermeasures for Sediment Disaster Prone Areas. This map shows areas designated as landslide disaster warning zones and landslide disaster special warning zone.

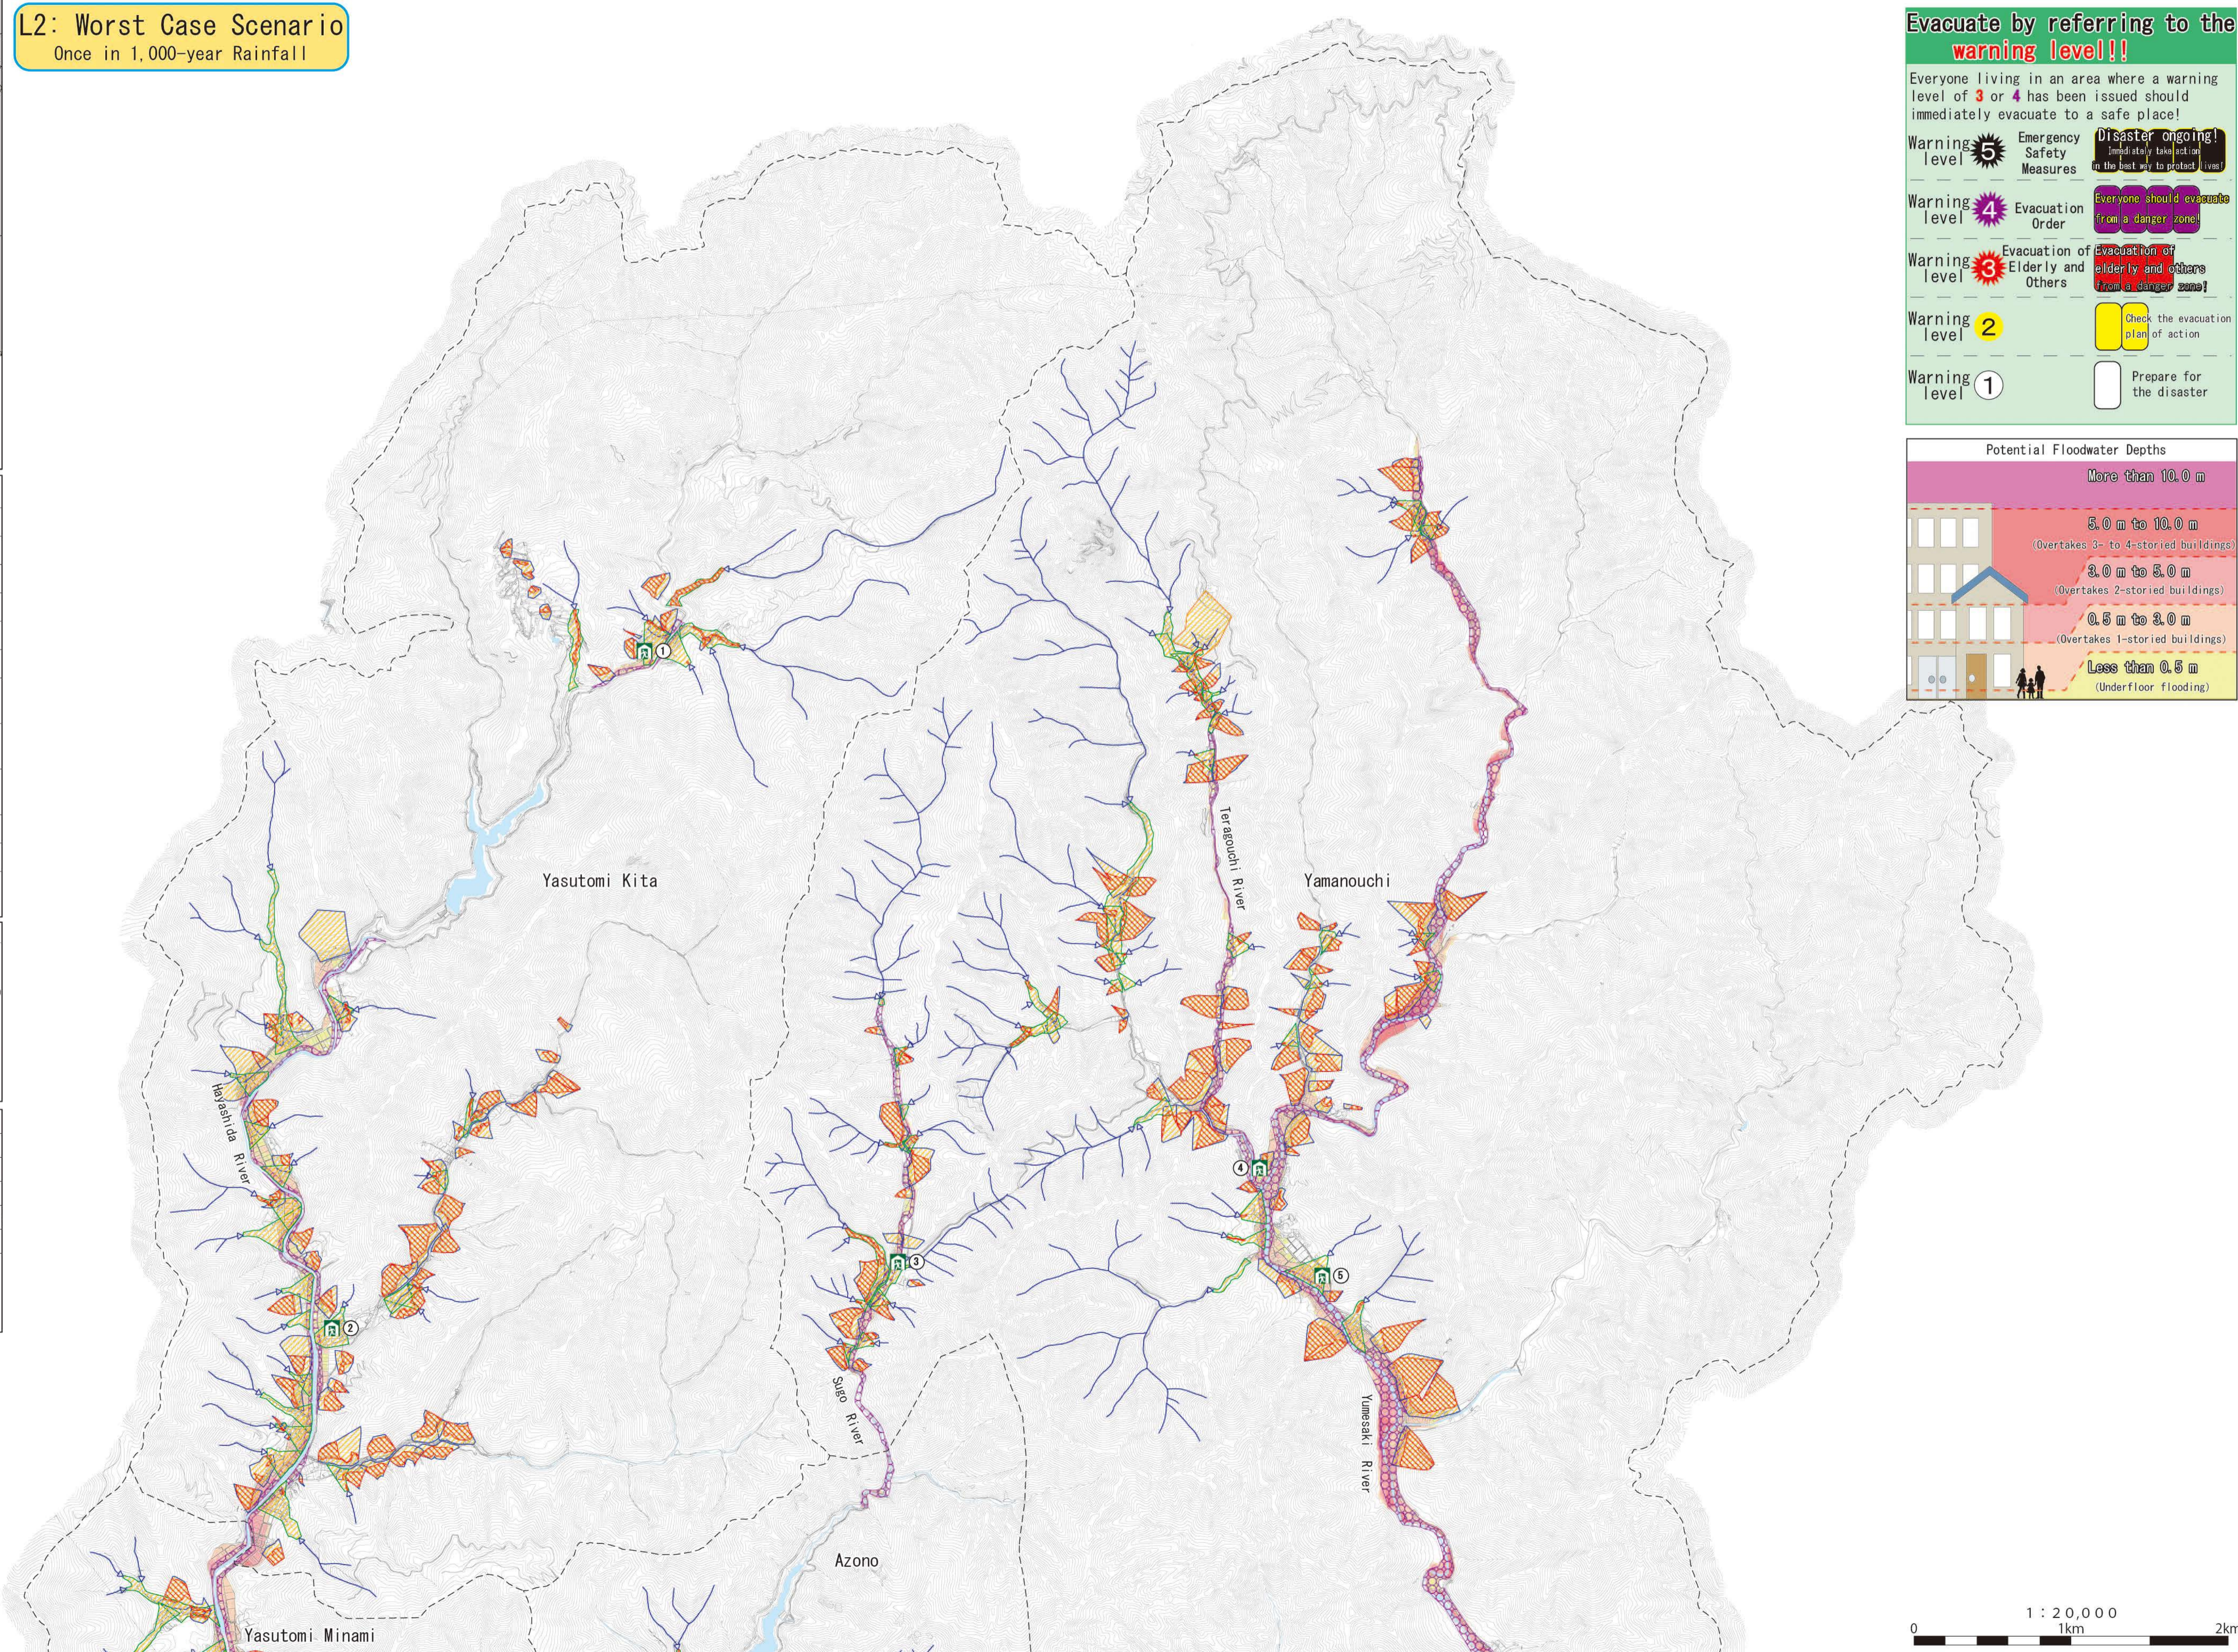

L2: Worst Case Scenario
Once in 1,000-year Rainfall
